

Publication Year 2017

Strengthen your company

By using energy more efficient

Do you know

Which parts of your business use the most energy?

Can you use less?

And perhaps use renewable energy instead?

There are a number of benefits

Together we can change how energy is being used in small and medium-sized enterprises. We offer a diverse portfolio of support that can help your company get started with improving energy efficiency. In addition to your company contributing to a more sustainable future, you will also benefit from:

- **Reduced costs**
- **Increased competitiveness**
- **A stronger corporate brand**

**YOUR COMPANY CAN
RECEIVE UP TO SEK 50,000
FOR AN ENERGY AUDIT.**

We offer several different types of support, both for your company and a sustainable future.

Support for energy audits

Your company can receive up to SEK 50,000 to carry out an energy audit, which provides suggestions for energy efficient investments.

The regional energy agencies can help you before, during and after your energy audit, and inform you of what other support is available.

Network for improving energy efficiency

In our corporate energy efficiency networks companies will share experiences and receive support and advice from energy experts.

Environmental studies – prior to an energy efficient investment

This support is offered to companies that want to extend their work with energy efficiency. The support consists of a more in-depth analysis or study, prior to an investment, leading to more efficient energy use.

Incentives for improving energy efficiency

If your company is subject to environmental inspections and enforcement, you can receive help with improving energy efficiency from the inspector.

Energy services

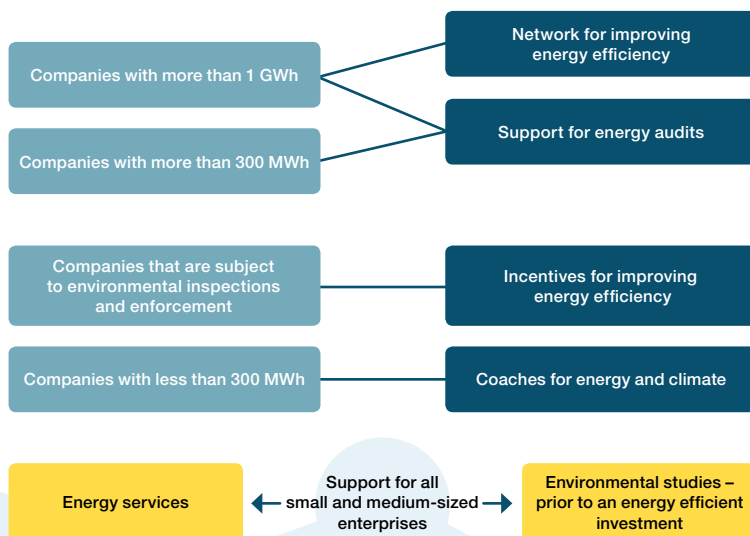

There is a need for increased knowledge and awareness of how energy services can help your company. For this reason, we provide guidance and knowledge-raising initiatives for companies that want to learn more about ordering energy services.

Coaches for energy and climate

If your company's energy use is below 300 megawatt hours, you can receive guidance from a coach. You can get help to conduct an energy review with suggestions on how to be more energy efficient and climate smart. Your company will also benefit from rewarding exchanges with other participants.

What support can be provided to your company?

The support which best suits your company depends on your energy usage. However, some of the support activities are appropriate for all small and medium-sized enterprises.

TO ACHIEVE A MORE
SUSTAINABLE FUTURE,
WE HAVE TO

UTILIZE OUR
RESOURCES
MORE WISELY

THIS APPLIES
IN PARTICULAR
TO ENERGY

IN ALL SMALL
AND MEDIUM-SIZED
ENTERPRISES

**ENTERPRISES
LIKE YOURS!**

For more information

Contact your regional energy agency or read more about all our support to small and medium-sized enterprises at **energimyndigheten.se/smf** (Only in Swedish).

This support is co-financed by the European Regional Development Fund through the National Regional Fund Programme.
